Welcome to your Done-For-You Preschool Curriculum

Whether you're brand new to homeschooling or this is a new curriculum for a path you've traveled before, let's take a moment and celebrate! Each year, each child, and each new milestone are opportunities to appreciate, smile, and enjoy.

It can be all too tempting to fret, worrying over the "what ifs" and "maybes" and the complete unknowns. But there's no need. The combination of your love for your child, a child's innate love to learn new things, and this already done-for-you homeschool curriculum will make this next year simple and (hopefully!) enjoyable.

While there are worksheets and activities for each day, preschool is a time when every moment at home or out in the world is part of your child's education.

If you take a moment to see through your child's eyes, you'll notice things you've taken for granted with fresh wonder. That wonder combined with natural curiosity and this intentional curriculum will help guide you through this foundational year of homeschooling.

The most important part of their education when they are this young is sparking their love of learning, teaching them not to be afraid to observe and engage, and teaching them how to learn. This curriculum is intentionally minimalistic: the necessary skills are covered, reviewed, and built upon throughout the year but busy work is kept to a minimum so you have plenty of time to read books, explore your backyard, cook together, or do whatever it is that catches your fancy.

And don't forget: every moment helps with learning! You can reinforce their counting skills and hone their observational skills by keeping track of how many blue cars you pass on your way to the grocery store. You'll build their language and communication skills when you ask them to tell you about the story you read to them the day before...or to make up one based on their favorite toy. You will help them learn about the world around them when you take the science activities from the curriculum and show them where they are in the world around them.

How to use this curriculum

This curriculum is intended to be both educational and enjoyable for your child, but also for you! While every parent must be aware of their own state's laws and we make no guarantee that this curriculum is exhaustive for every locale, it covers what we have seen to be the foundational skills needed and provides homeschooling parents with a simple, done-for-you curriculum.

A calendar has been provided for you that walks you through the activities in each subject, one week at a time. It's been intentionally formatted on a weekly basis instead of daily so you can do what fits with each day and even choose to do a 3 or 4-day week with workbooks and 1 or 2 days at your local library, in your backyard, or on a field trip.

Don't forget to enjoy the freedom and flexibility that comes with homeschooling!

Printing this curriculum

While you are certainly welcome to print out this whole curriculum at once and put it in a binder, it's been purposefully broken down into months and weeks so you can also print it out one month or even one week at a time.

One fabulous benefit of a digital curriculum is you can also print worksheets out again if they need added practice, review in the future, or if you have more than one child. You can email the files to your local office printing store, such as Staples or OfficeMax, or choose to print them at home. You can even use The Homeschool roots printing for excellent prices and order online. It was created by homeschoolers for homeschoolers.

Stop planning and start teaching.

Do I have to start in September?

Nope. This curriculum is made to work for YOU and YOUR CHILD in whatever way is best for you. It's been kept this way intentionally, to allow you to start when it's right for you and continue on at your own pace.

Each month has 4 weeks, which allows for sick days, fun days off, or vacation days. Because the lesson plans are done weekly and monthly, you have ultimate flexibility while still having a fully customized plan to follow that removes all the guesswork.

Remember, homeschooling comes with a lot of freedom and this structure is actually a tool to help you enjoy that freedom, not take it away. Flexible structure equips you to work at your best pace, at the time that's right for you, while still helping you accomplish all your goals for the year.

What if my child gets stuck?

The flexible structure of this program allows you the opportunity to slow down and spend a little more time on any skill with which your child is struggling to reach mastery. Don't stress if your child needs extra practice. Simply adjust your schedule and teach them at a pace that works for your family.

However, sometimes the best thing to do when a child gets stuck on a certain subject (say math) is to move into a different subject (like music or reading) or step away from school altogether and do something active to help reset their minds. Young minds can get stuck in a rut of frustration and need your help to propel forward. At this age, it's okay to redirect and then revisit when feelings are regulated, instead of "powering through" like they will learn to do as they get older. Coping skills develop with age.

And psst...sometimes it's not the kids who get stuck, but the parents. It's okay to redirect and refresh then, too!

Homeschool roots
© 2024 homeschool roots

Is this curriculum exhaustive?

No curriculum is ever truly exhaustive; parents will need to supplement the activities and lessons with real-life experience, reading books, and discussions. However, it's as simple and complete as we could make it without it being overwhelming for you.

I encourage you to make regular trips to your library and read fantastical stories, educational books designed for young children, and even poetry. Borrow dramatic audiobooks (or get an Audible subscription!), attend local plays or watch them on YouTube, and listen to music from all over the world and all throughout time.

The more your child can taste, touch, hear, see, and feel the world around them, the more they will learn. However, these activities and lessons will help provide the necessary academic foundation for kindergarten. The rest of their education is waiting to be discovered!

Can I really do this?

In a word: YES. Yes, you can. You are uniquely equipped to home-educate your child because you love them, you understand them, and you want to help them grow and succeed. You are also equipped because you've made this decision and whatever your reasons are, they brought you here and they are the best ones for your family.

There are scads of resources out there for homeschooling parents, but in the preschool and kindergarten years, the most important thing you can remember is to just be there with your child and help them learn. It's really that simple this year. You can learn together if need be.

Let the adventure begin!

Homeschool roots

Kindergarten Readiness

While each state has its own standards for scope and sequence, kindergarten skillsets and knowledge bases are fairly consistent. This curriculum has been designed to cover all the necessary areas and even a few bonus ones so your child is prepared when it's time to start kindergarten, whether you continue to home-educate or not.

Here's an overview for you of what's generally expected of your child to be "**kindergarten ready**" at the end of this year:

Math

Math is pretty simple at this age and has moreto do witharithmetic readiness than traditional math. The idea is for your child to be able to name numbers and understand what those names mean.

- Counting, 1-10 confidently and 1-20 with assistance
- Understand how numbers fit together (what comes before and after, up to 10)
- Understand numbers and their value
- Look at a small group of items and be able to identify how many are in it with a number (i.e. there are 3 apples on the table)
- Understand more/less
- Understand bigger/smaller
- Simple graphing to categorize quantity
- Sorting (by color, for example)
- Very simple addition, using fingers or items to solve math equations and word problems
- Colors
- Shapes

Science

Science for young children focuses on helpingthem observe the world around them, as well as teaching them to look a little deeper. Why do things work this way? What is the connection between them? What don't I know? These activities are designed to instruct, engage, and spark curiosity.

- Names of animals and the sounds they make
- Understand that living things have a life cycle (parent, baby, growth, etc.)
- Weather
- Habitats and environments: where do living things belong and what do they need to grow well?
- Understand seasons

© 2024 homeschool roots

Reading & Language Arts

Kindergarten readiness in this areadoesn't mean being able toactuallyread, but rather identifying letters, understanding that they combine to make words, and being comfortable with their sounds. This is the foundation of reading and grammar.

- Learn the letters A-Z
- Recognize capital and lowercase for each letter
- Be able to tell which sound each letter makes,as well as hear it when others make it
- Rhyming
- Listen to reading (instructions and stories)
- Hear words and identify beginning sounds
- Draw a picture to express an idea; use words to explain it .
- Some parents will choose to introduce sight words at this age; we have a separate curriculum for sight words if you would like

Writing

In preschool, your child will get comfortable holding a pencil and tracing lines, as well as begin to develop writing skills by tracing and then copying. By the end of this year, they should be able to write their name, even if it's not perfect (it doesn't need to be!), and be comfortable with manipulating a pencil.

- Trace lines from left to right
- Trace letters from top to bottom
- Begin to write their name
- Write the alphabet, capital, and lowercase
- Trace larger words
- Cut lines as directed

Early Logic & Thinking

There are extra activities each monththat work hand-in-hand withtheother content to help your child develop critical thinking skills pertaining to problem-solving and deduction, as well as awareness of the world around them at an age-appropriate level. These activities are meant to engage their mind with hands-on problem-solving that delights instead of frustrates, helping them learn the pride and joy that comes from doing challenging tasks. The activities also help build their confidence as they learn that they can do difficult things.

You can also foster this skill in their playtime by giving them toys such as Legos®, building blocks, puzzles, rainbow bears, marble runs, mazes, and more.

© 2024 homeschool roots

Additional Skills for Kindergarten Readiness

Beyond these academic skills are additional skills yourchild needs forkindergartenreadiness. If you ave our Kindergarten Readiness Enrichment Pack, many of these concepts are taught or reinforced there. Here's a quick rundown of them:

SELF CARE

- Get dressed independently, from undergarments to outerwear
- Brush teeth
- Be potty trained and have proper hygiene after using the bathroom
- Wash their hands well when soiled and after using the toilet
- Wash their bodies regularly
- Wear clean clothes and know to put soiled clothes in the laundry

SELF AWARENESS

- Know their first and last name
- Know their age
- Know when their birthday is and how old they will be
- Know who their family members are and identify them
- Be able to verbalize feelings: joys and frustrations
- Identify preferences
- Express when they aren't feeling well and explain how
- Pick up toys and messes (within reason, of course)

SOCIAL SKILLS

- Use manners when communicating; understand social cues
- Interact with peers and others in culturally and socially appropriate ways
- Be able to ask questions and listen to answers
- Show interest in others and what they are doing
- Be able to share toys and attention
- Follow multi-step directions

PHYSICAL ABILITY & AWARENESS

- Look both ways before crossing the street
- Hop on one foot and with both feet together
- Touch nose, toes, etc. as directed
- Have pencil control
- Understand healthy food choices
